

A Threshold heterogeneity

$$\bar{\theta}_A = 17.26 \text{ mV}$$

B Mean threshold

$$\sigma_A = 0.74 \text{ mV}$$

— PD3: A high-background branch — PD2: A burst branch ★ Reference critical point

* Coexistence verified at black points. Arrows: parameter-scan direction. Open circle: continuation limit.

Full A/B/surround feedback retained. The EE multiplier still acts on both cores; only A-dominated bifurcations are shown.
