

Post-onset autonomous dynamics (limit cycle vs saturation) + finite-time susceptibility along the trajectory

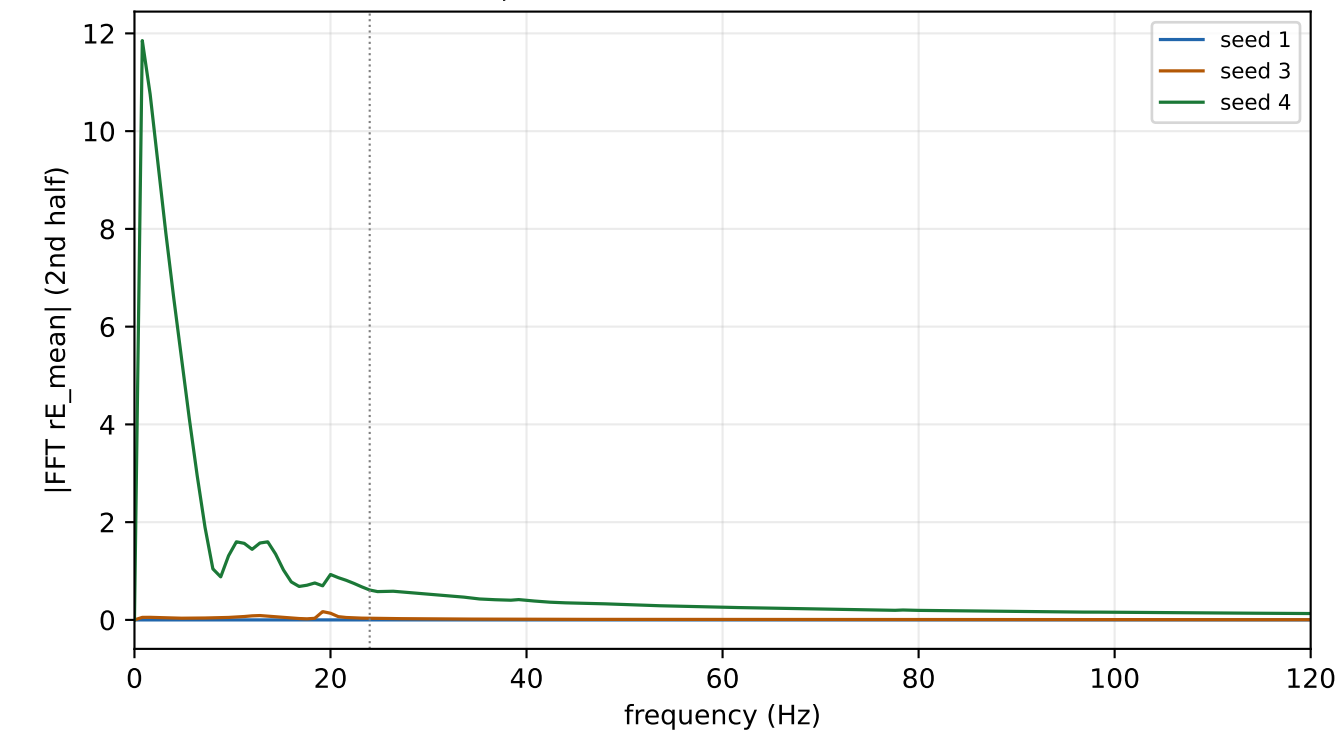

A: autonomous $rE_{\text{mean}}(t)$ from pre-onset FP + onset q-field

B: $rE_{\text{max}}(t)$ (dotted=saturation 0.1)

C: spectrum (dotted=continuation $\sim 24\text{Hz}$)

D: finite-time susceptibility along the trajectory (frozen $J(t)$)
