

Exact periodic-q hold is tested without relaxing the entry-ordering no-go

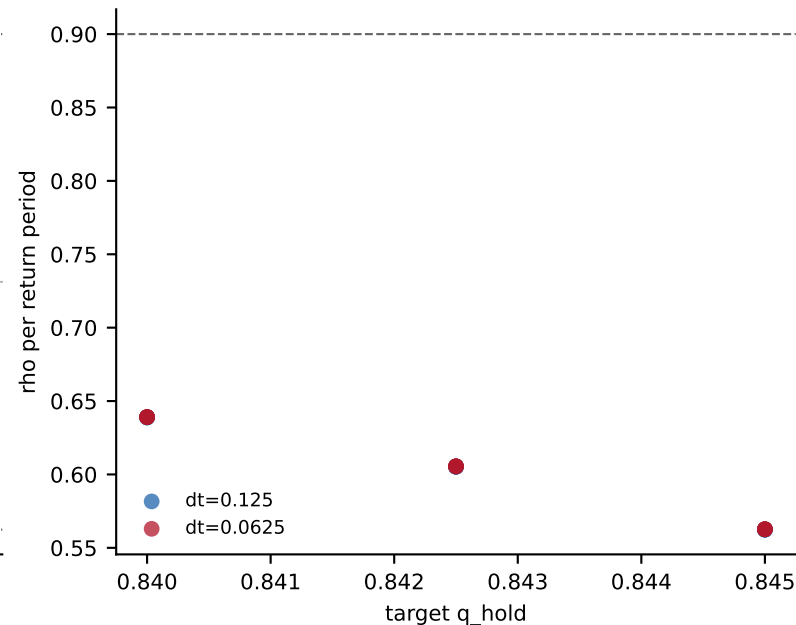

A Exact periodic q range

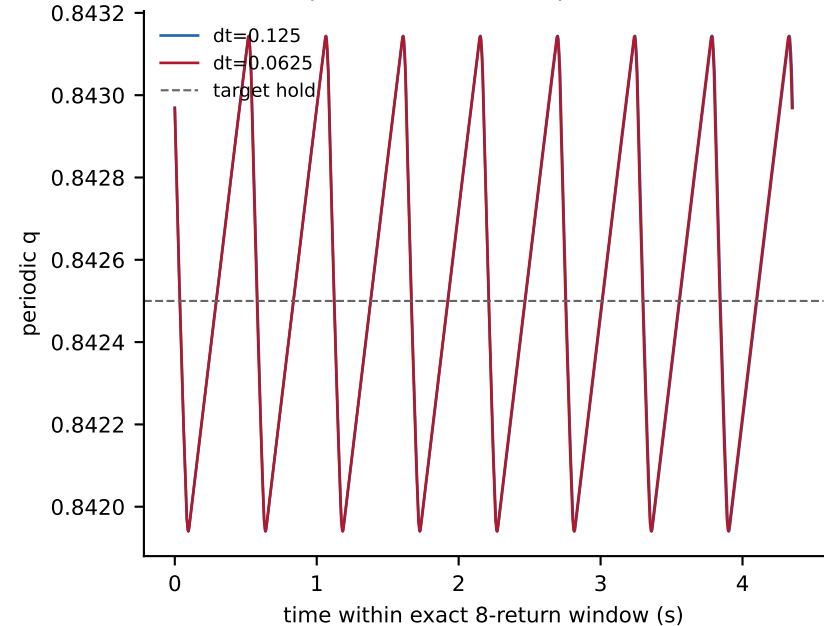

B Exact mean tracks mapped hold

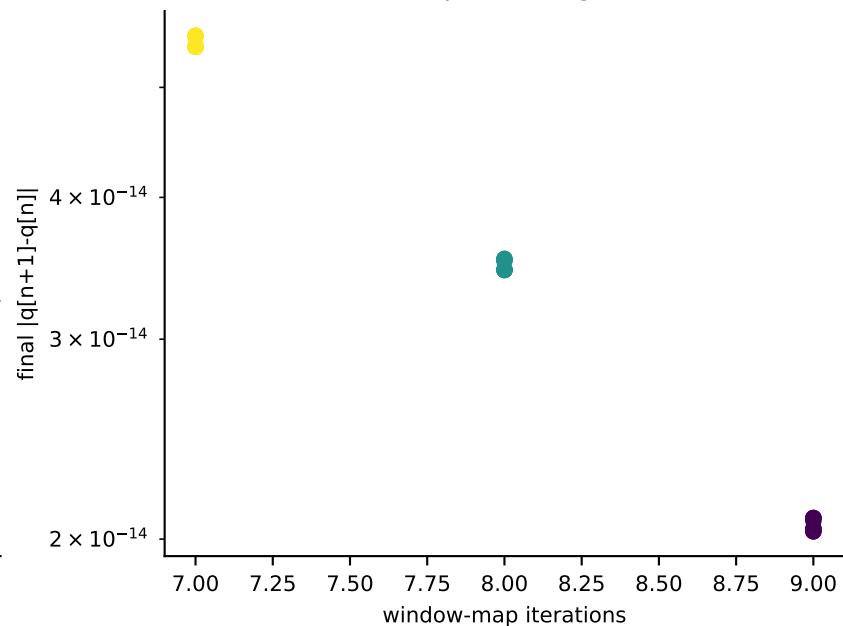

C Stroboscopic contraction

D Representative exact periodic orbit

E Stroboscopic convergence error

F Periodic-q oracle verdict

```
hash_locked_inputs_match: PASS
complete_24_q_phase_dt_combinations: PASS
all_periodic_q_min_above_gate: PASS
all_periodic_q_max_below_gate: PASS
all_periodic_means_match_q_hold: PASS
all_per_period_rho_below_gate: PASS

Even if all hold gates pass:
BUT_ENTRY_ORDERING_NO_GO_PERSISTS
fixed sensor + scalar q is not autonomous.
No E-to-E or bath-containment claim.
```
