

Waveforms and rasters across four activity states

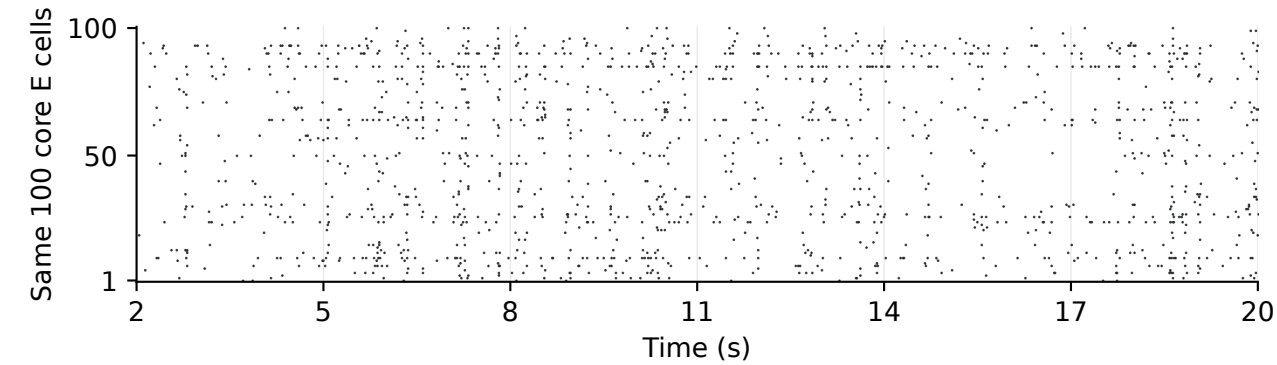

Core A · one fixed network and noise realization · threshold-lowering amplitude = 1

Low-activity background | $E \rightarrow E = 0.5$

0 bursts CV N/A Mean 0.71 Hz

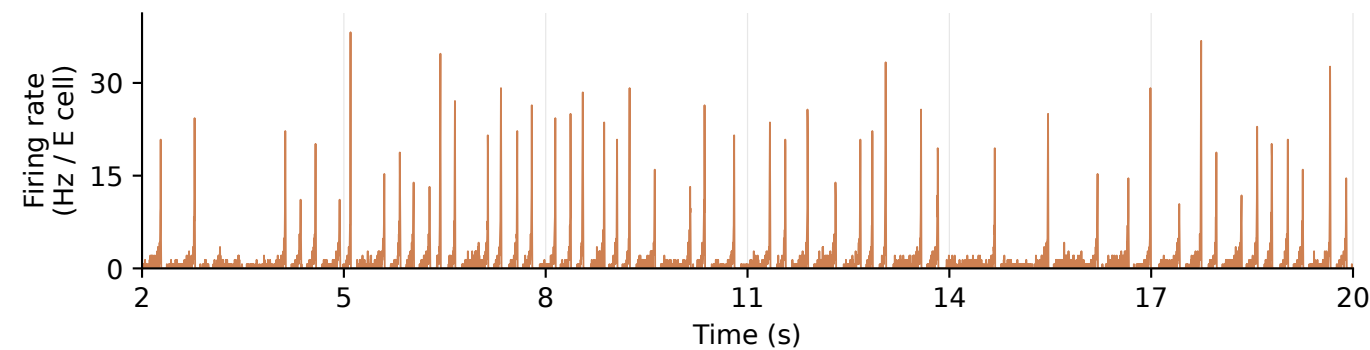

Raster | occupied 2 ms bins

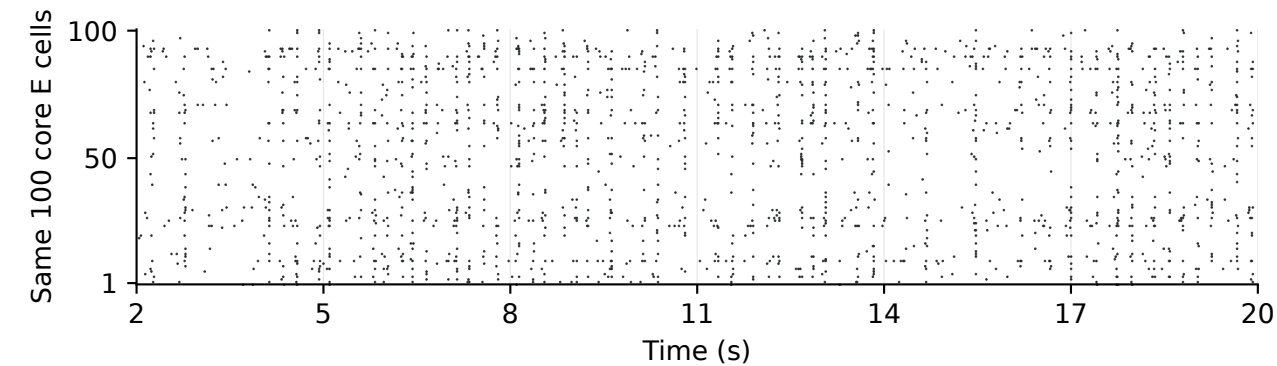

Irregular burst | $E \rightarrow E = 0.7$

29 bursts CV 0.70 Mean 0.92 Hz

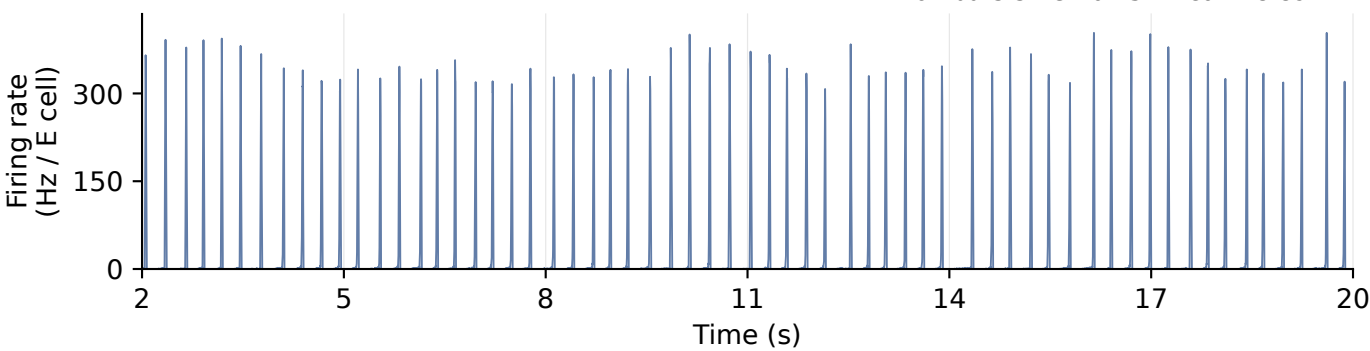

Raster | occupied 2 ms bins

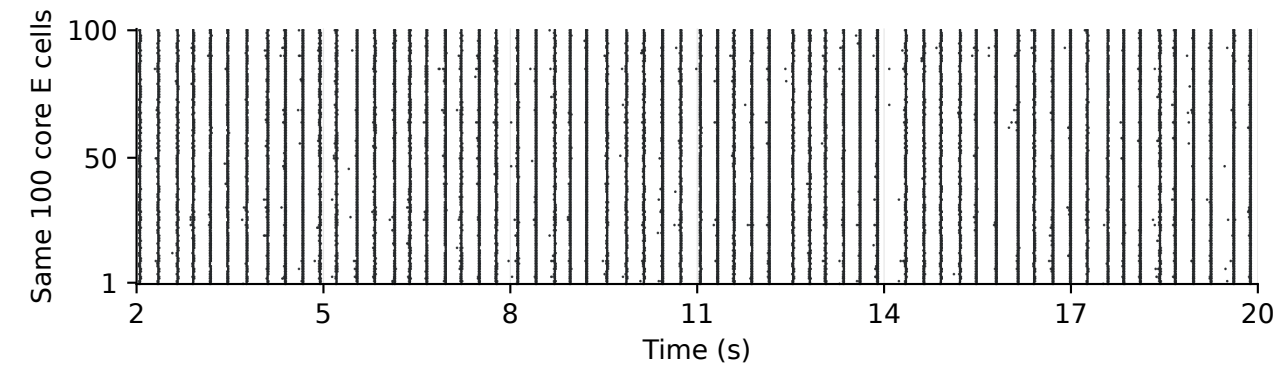

Regular burst | $E \rightarrow E = 1$

62 bursts CV 0.13 Mean 18.89 Hz

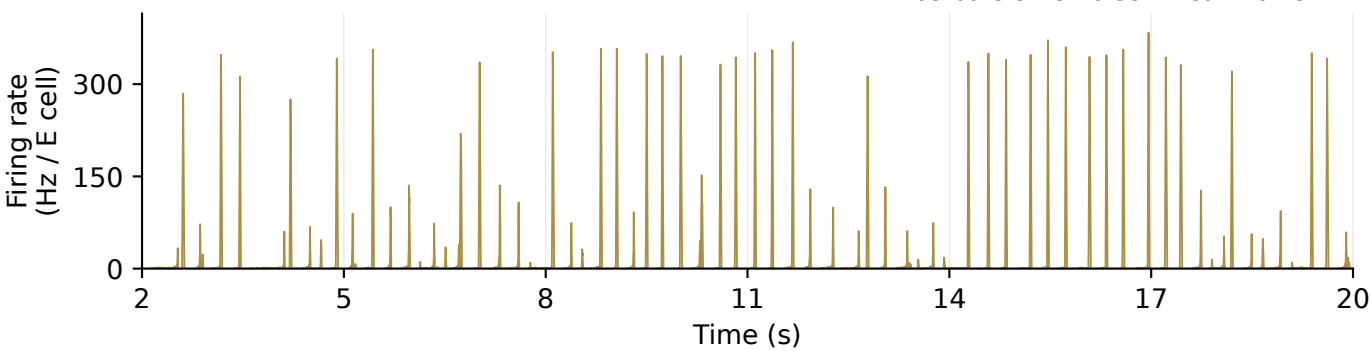

Raster | occupied 2 ms bins

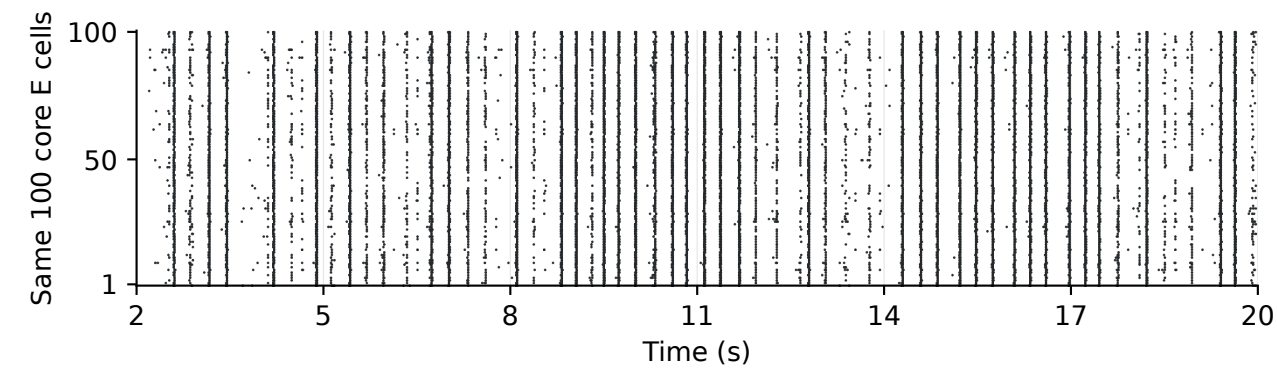

Intermediate state | $E \rightarrow E = 0.85$

63 bursts CV 0.35 Mean 10.75 Hz

Raster | occupied 2 ms bins

Population rate: all 720 core E cells. Raster: the same 100 recorded cells. Same 2-20 s window; waveform y scales differ by row.
