

Core burst onset and four native SNN examples

Deterministic bifurcation branches; numbered circles are native SNN time means.

Equilibria and stable burst orbits

1-4: the same Core A, threshold field and noise seed; all four precede the closure fold.

1 Resting

$J_{EE,core} = 0.5$ | no bursts

2 Irregular bursts

$J_{EE,core} = 0.7$ | IEI CV 0.70

3 Intermediate

$J_{EE,core} = 0.85$ | IEI CV 0.35

4 Regular bursts

$J_{EE,core} = 1$ | IEI CV 0.13

Waveforms: all 720 Core A E cells; linear rate axes vary by panel. Raster: the same 30 cells, occupied 2 ms bins.

IEI CV uses 2-20 s; displayed window is 4-7 s. Native labels do not identify deterministic attractors.
