

Core burst onset

1 Resting

$J_{EE,core} = 0.5$ | no bursts

2 Irregular bursts

$J_{EE,core} = 0.7$ | IEI CV 0.70

3 Intermediate

$J_{EE,core} = 0.85$ | IEI CV 0.35

4 Regular bursts

$J_{EE,core} = 1$ | IEI CV 0.13

The low-rate fold and its critical mode

$J_{EE, \text{core}} = 1.12541641$ | Core A E = 0.454005 Hz

Stable and saddle branches meet

One real eigenvalue reaches zero

Right mode: rate displacement

Left characteristic vector

Six-population characteristic vectors; S = surround. Full 402-coordinate vectors are retained in v2.

Core A and B: two spatial populations

No direct A↔B edges in this realized graph

Solved burst orbit at $J_{EE, \text{core}} = 1.15$

Full-network period: 577.009 ms. B peak follows A peak by 63.96 ms on this orbit.

The fold mode begins in A; the later burst recruits both cores. A/B are spatial identities, not state labels.

1 Resting / low activity

$J_{EE, core} = 0.5$ | No detected bursts | mean = 0.708 Hz

Same 3-second window

Same 600-ms close-up

Native SNN. Rate: all 720 Core A E cells. Raster: occupied 2 ms bins of the same 30 recorded cells.

2 Irregular bursts

$J_{EE, core} = 0.7$ | $IEI\ CV = 0.699$; 29 bursts | mean = 0.923 Hz

Native SNN. Rate: all 720 Core A E cells. Raster: occupied 2 ms bins of the same 30 recorded cells.

3 Intermediate

$J_{EE, core} = 0.85$ | IEI CV = 0.345; 63 bursts | mean = 10.747 Hz

Native SNN. Rate: all 720 Core A E cells. Raster: occupied 2 ms bins of the same 30 recorded cells.

4 Regular bursts

$J_{EE, core} = 1$ | IEI CV = 0.128; 62 bursts | mean = 18.887 Hz

Native SNN. Rate: all 720 Core A E cells. Raster: occupied 2 ms bins of the same 30 recorded cells.
