

A fixed-q inhibitory reserve corridor supports smooth additive exit

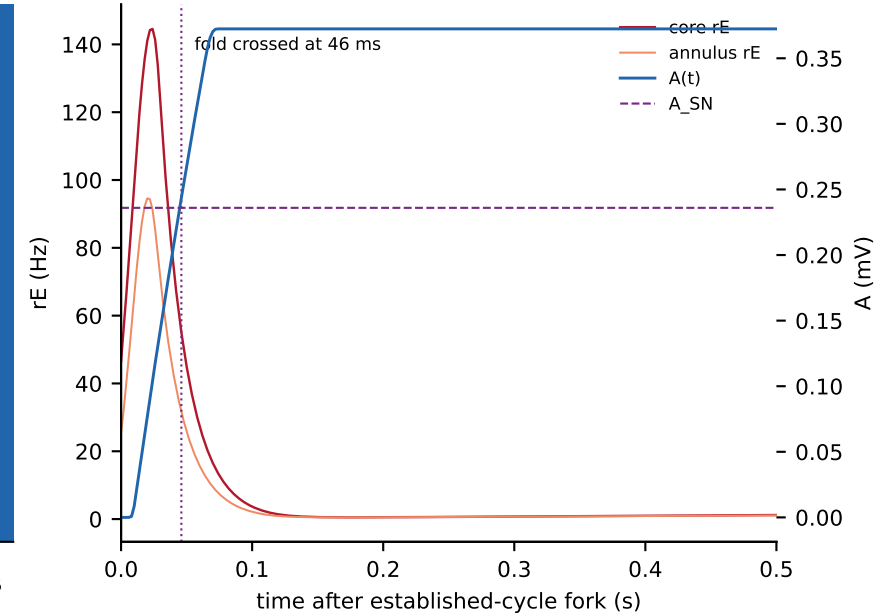

A Dual-dt instantaneous fold bracket

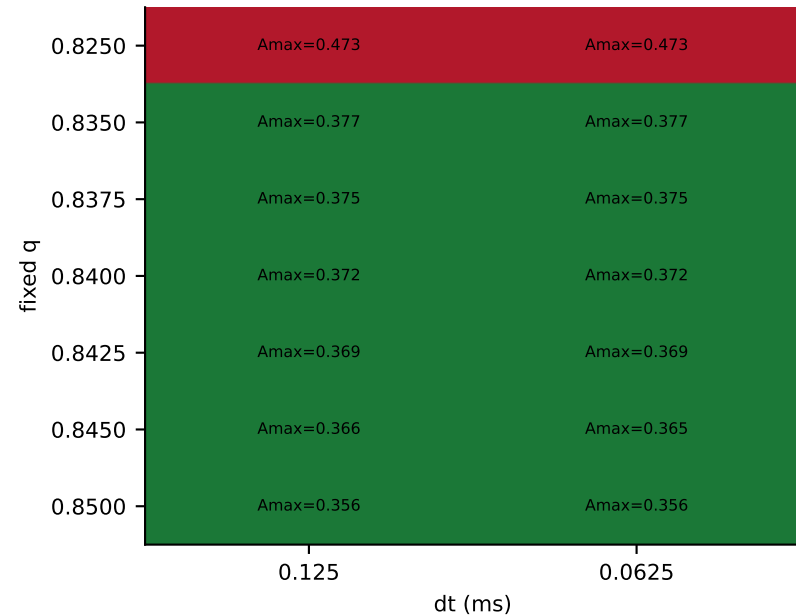

B Four-phase fail-closed outcome map

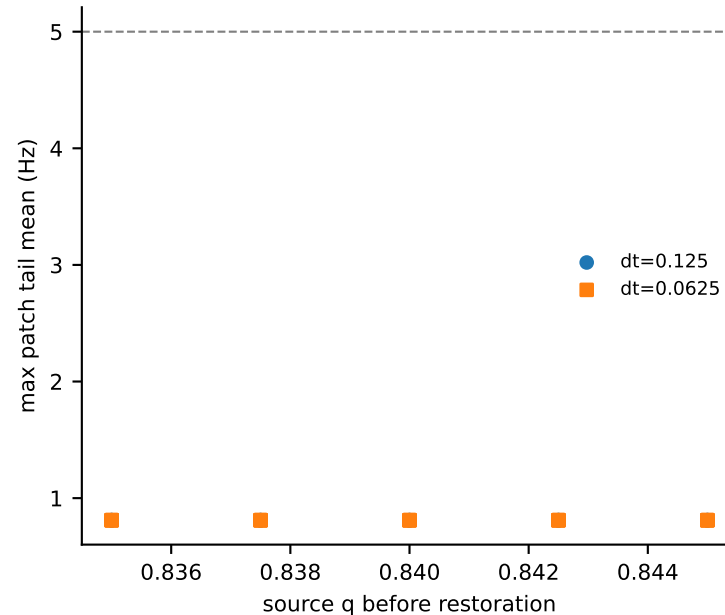

C Fixed-q occupancy-gated M ramp

D Smooth-ramp outcome (0=LLL, 3=failure)

E q=.90, A=0 restoration returns to LLL

F R0b verdict

If every gate passes:
safe fixed-q ramp geometry is established;
only R1 q_res/nullcline mapping is unlocked.
No autonomous reserve lifecycle is claimed.
