

Core A — bifurcation types

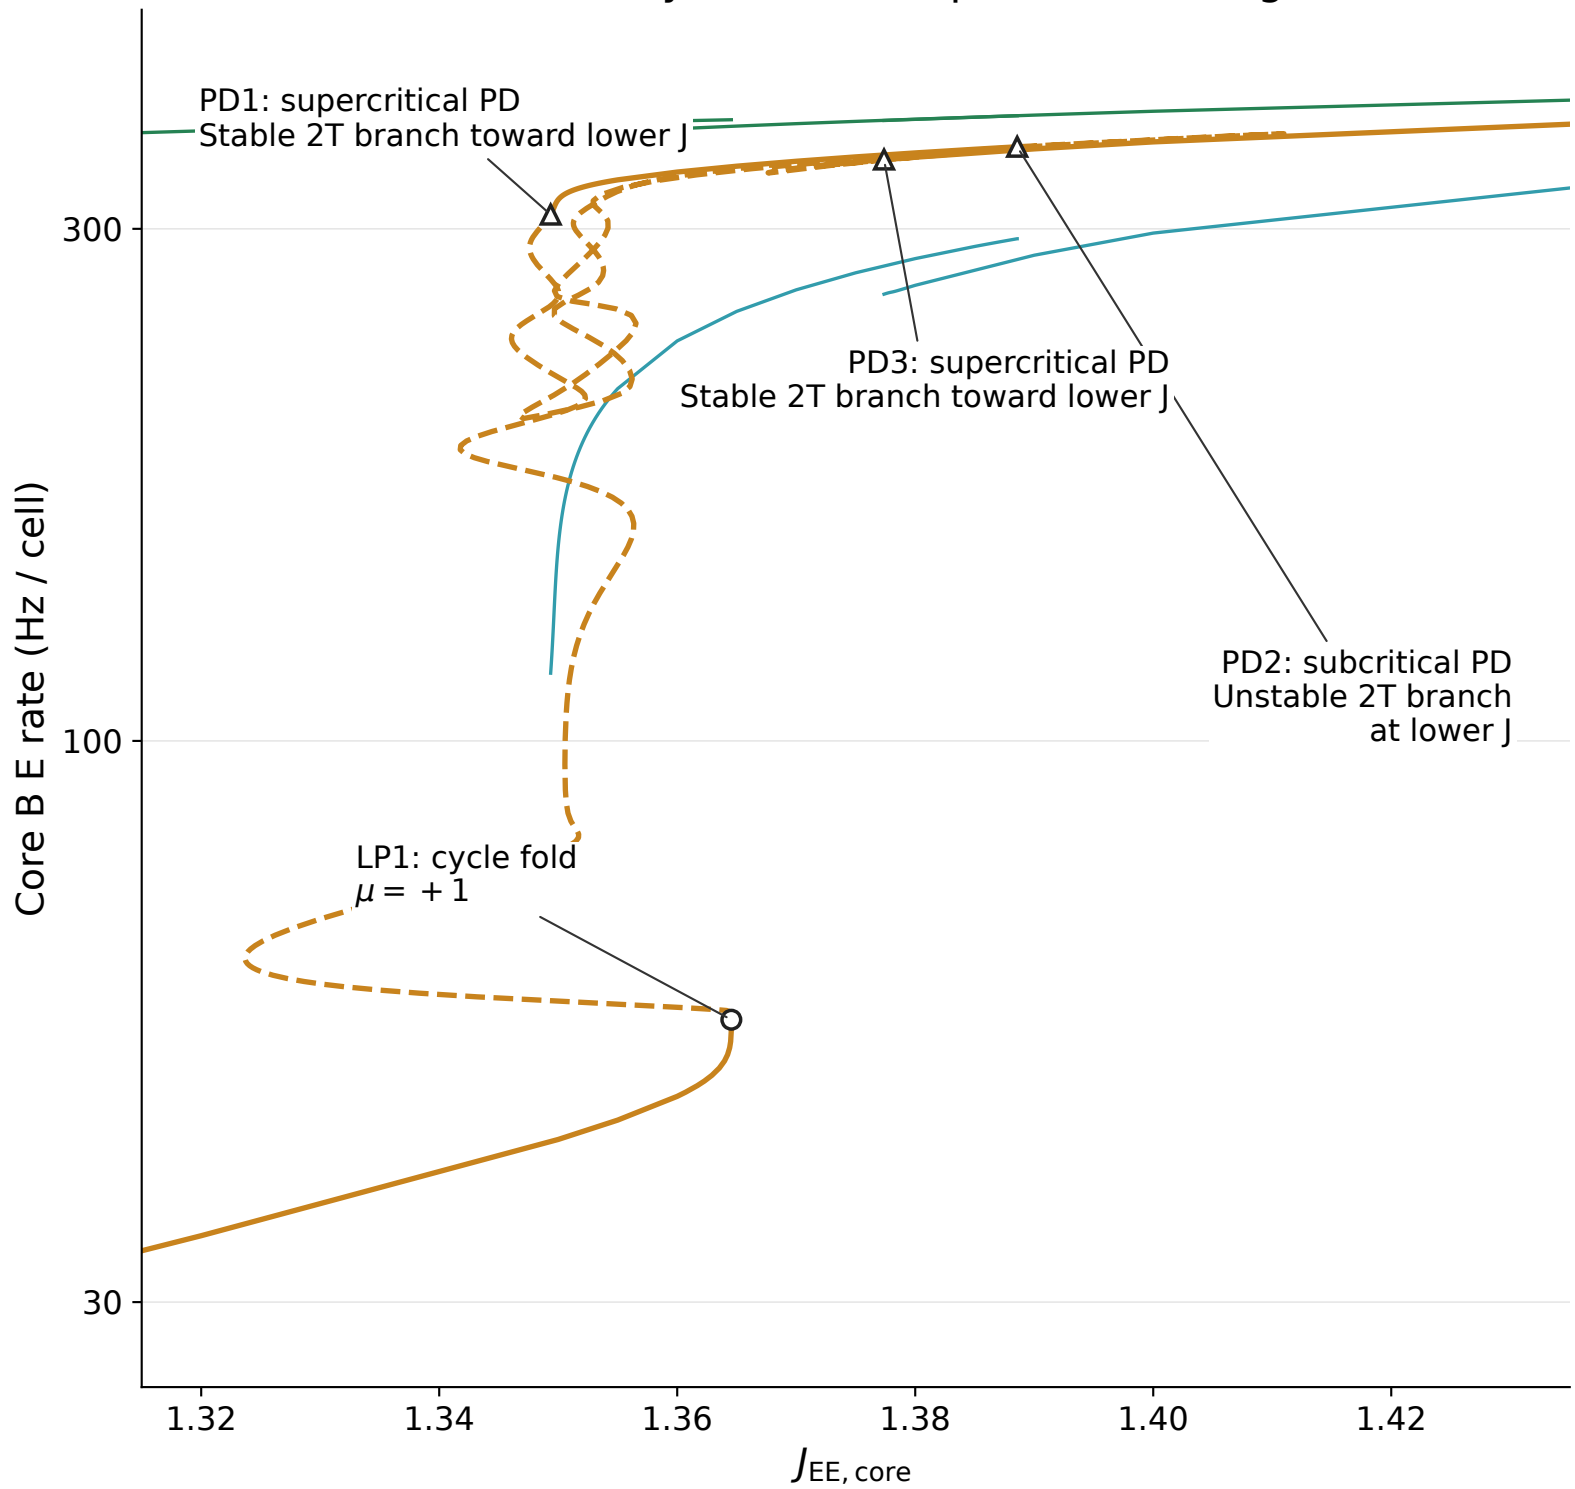

Core A — cycle fold and period doubling

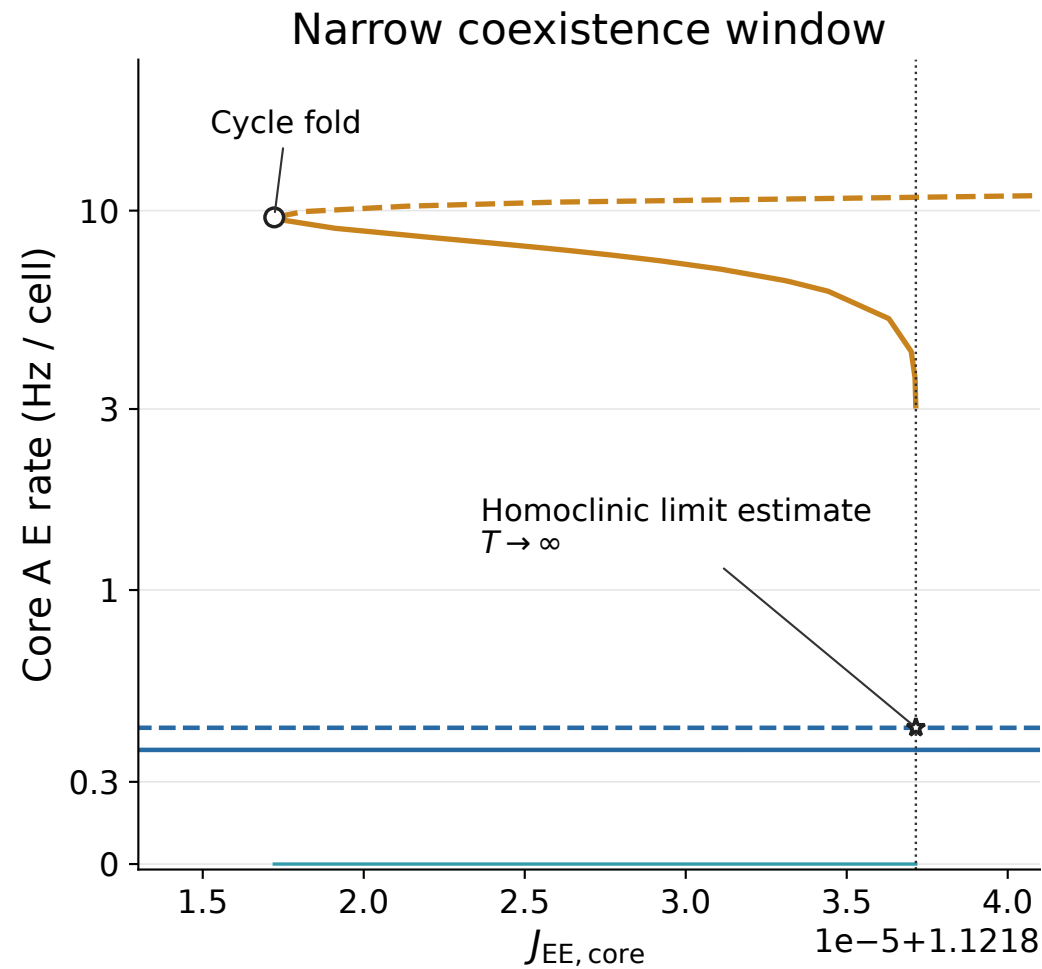

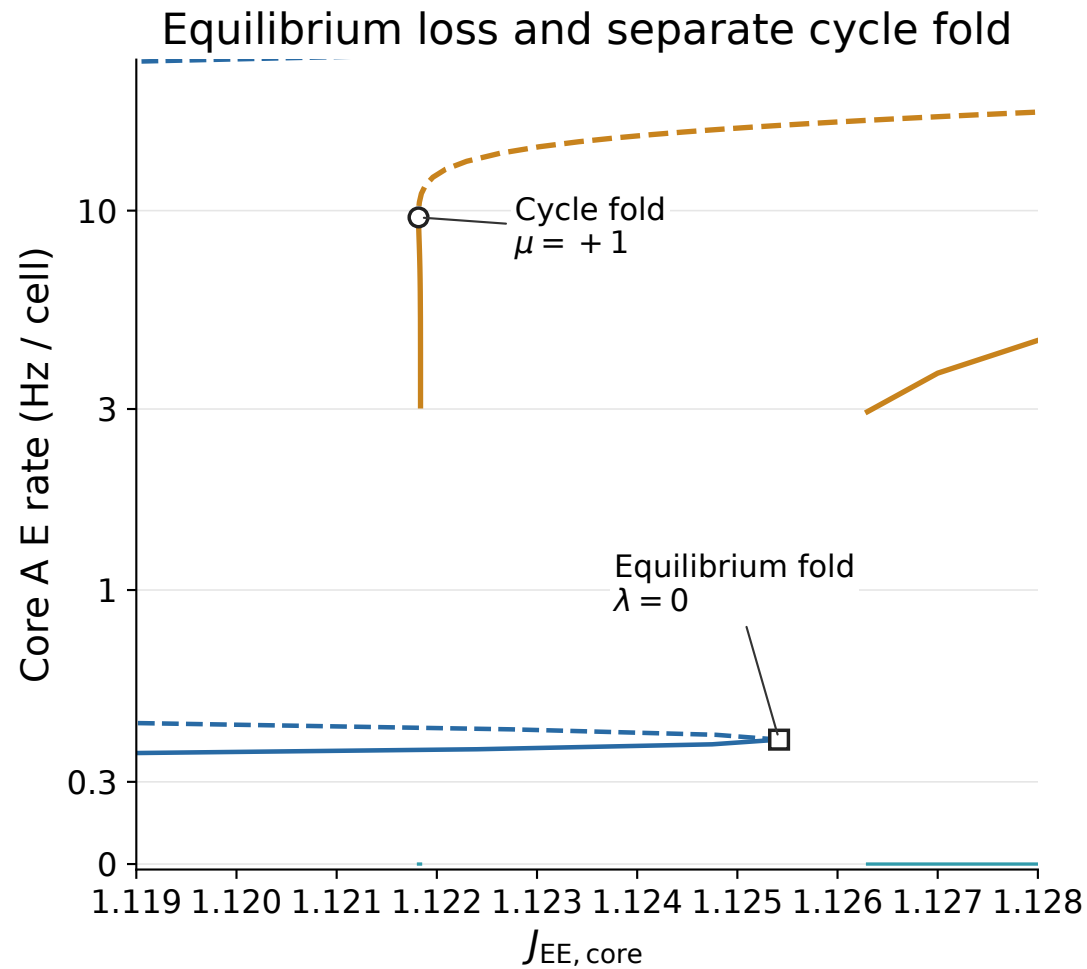

Core B — bifurcation types

Core B — cycle fold and period doubling

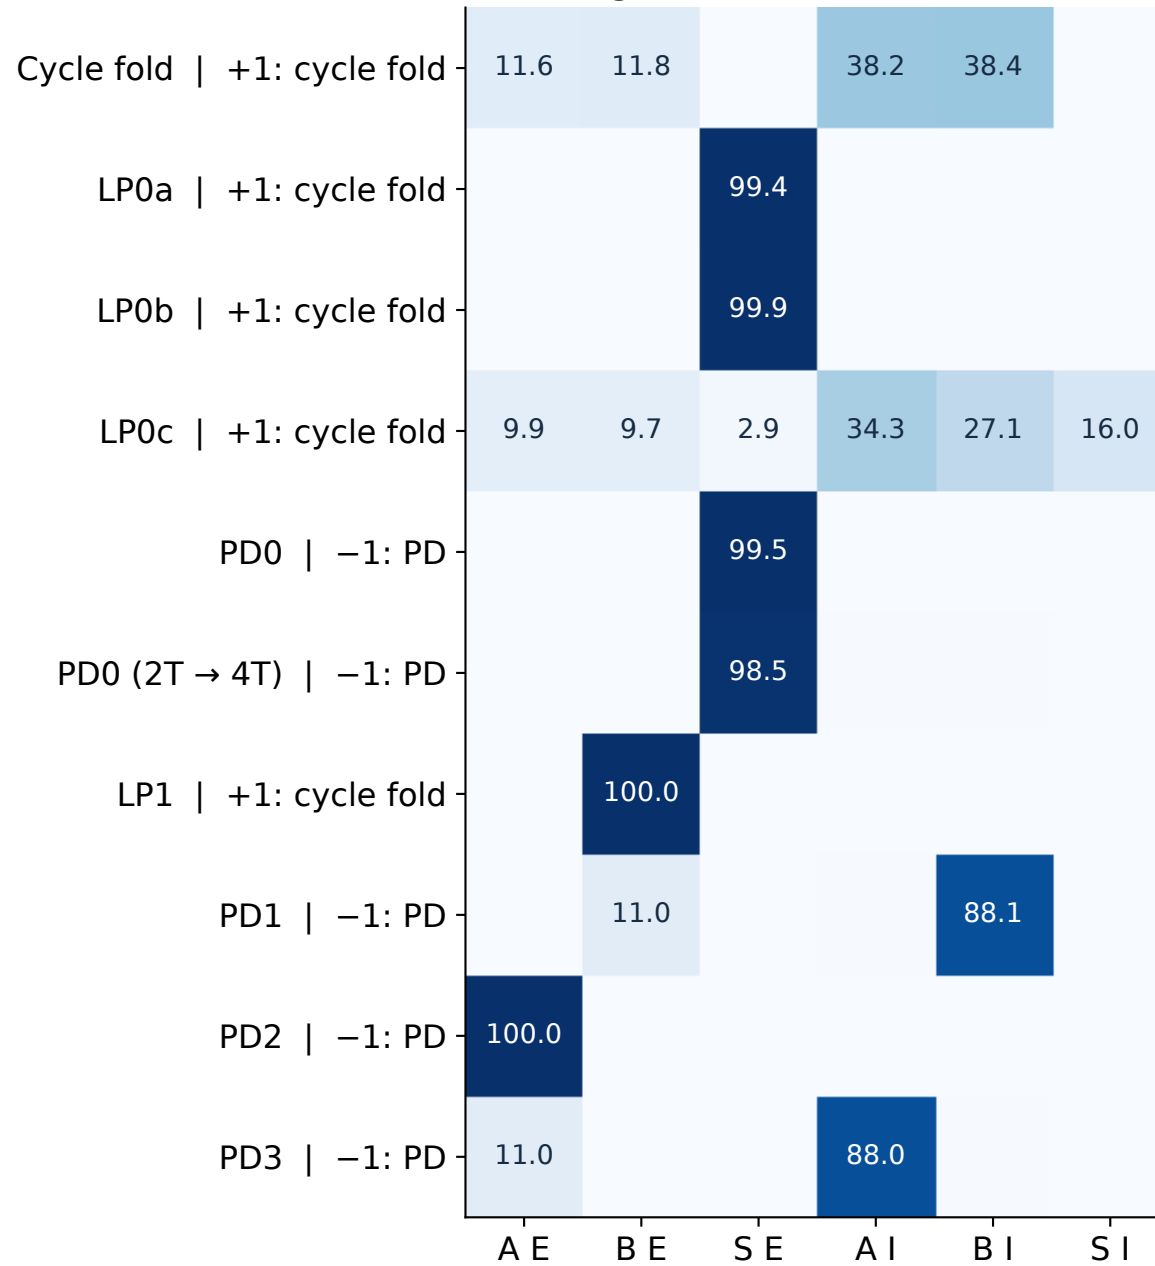

Low-rate equilibrium fold and burst coexistence

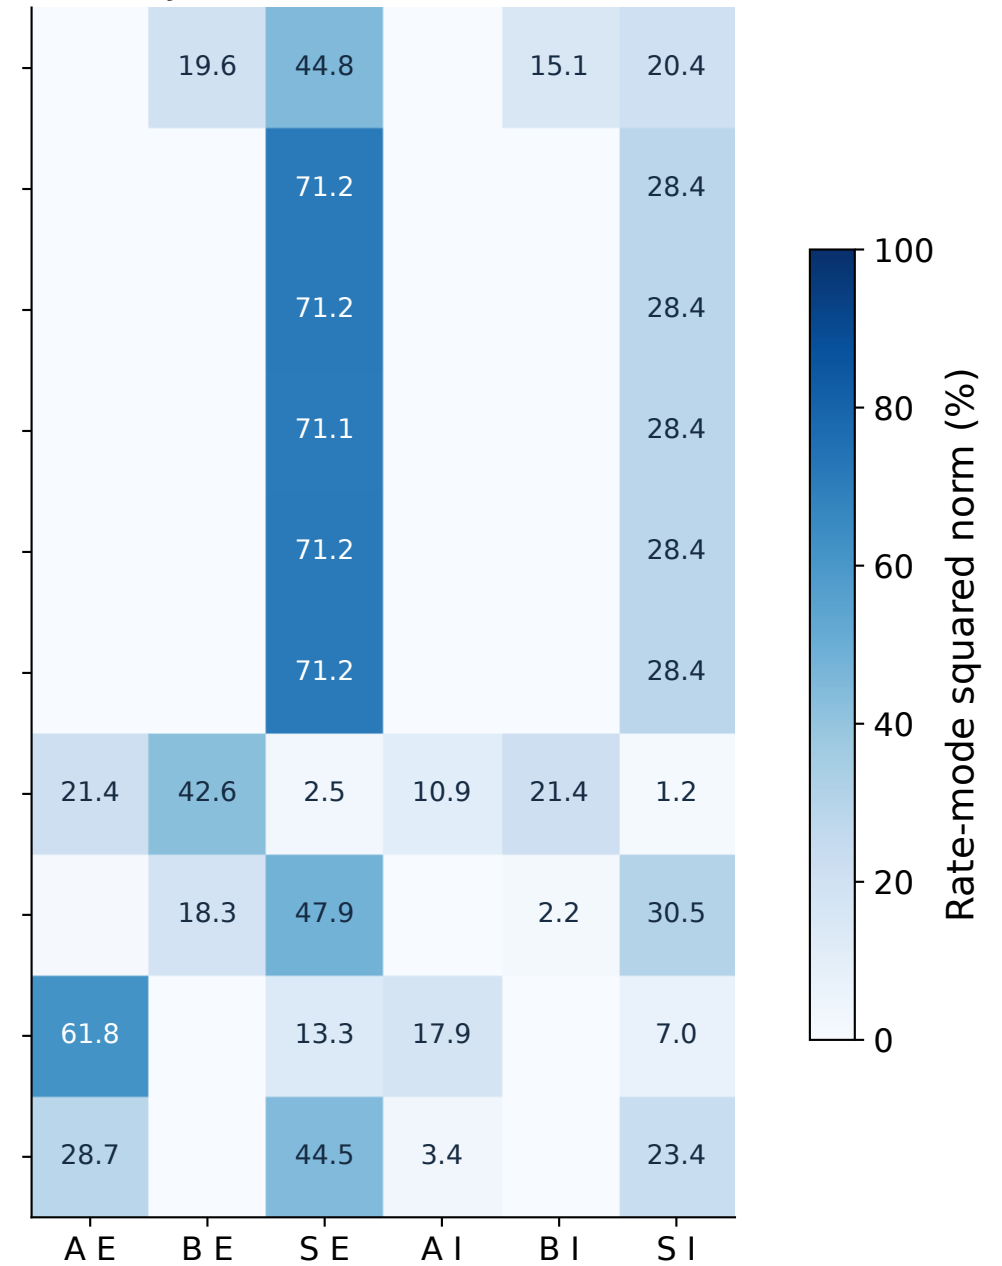

Which population expresses the critical mode?

Right critical rate mode

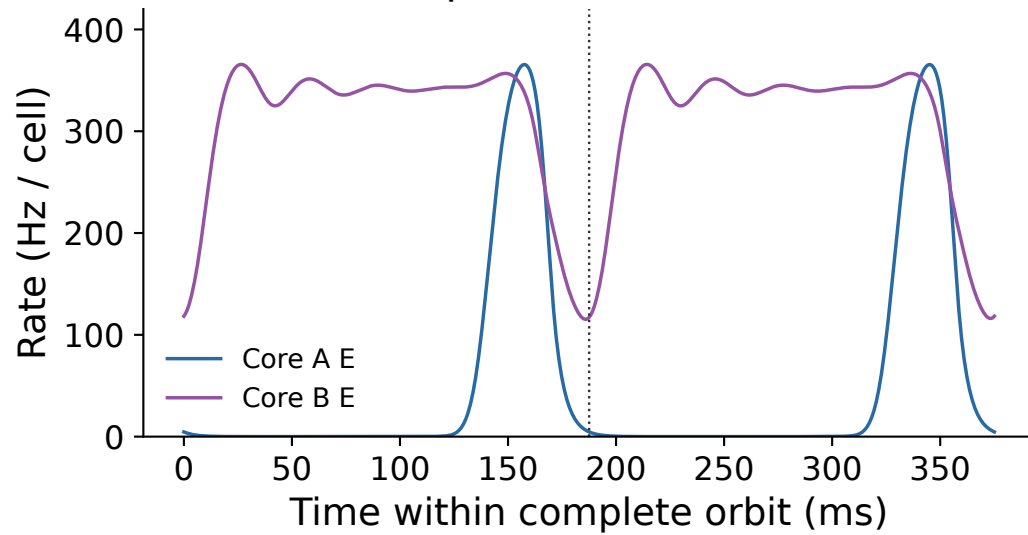

Adjoint critical rate mode

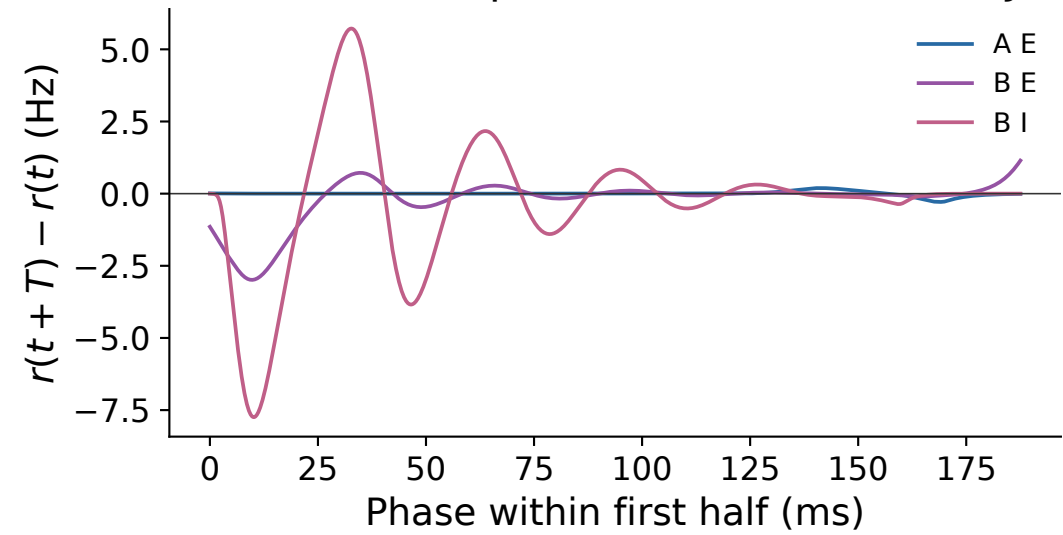

Period doubling changes the repeating pattern, not necessarily each burst interval

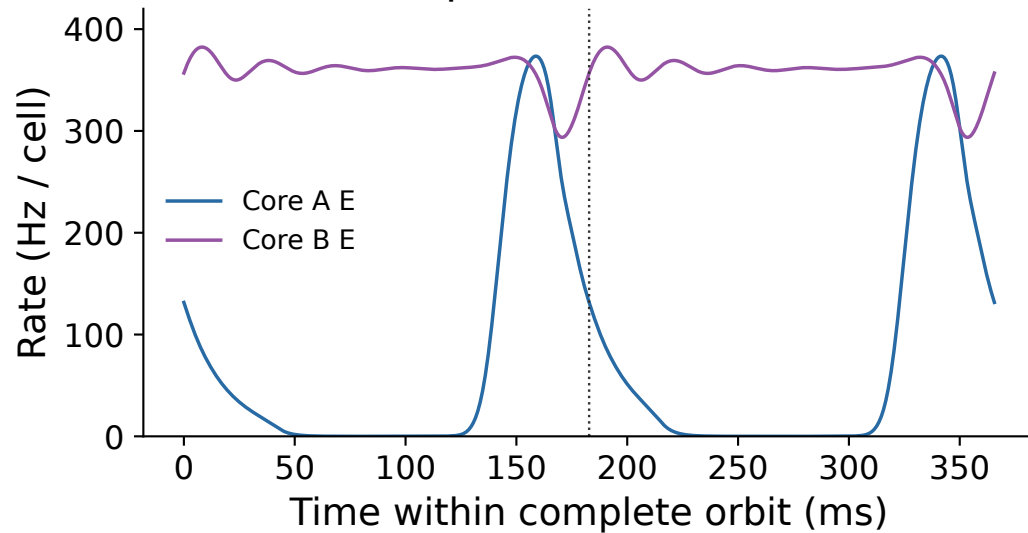

PD1: complete $2T = 375.074$ ms

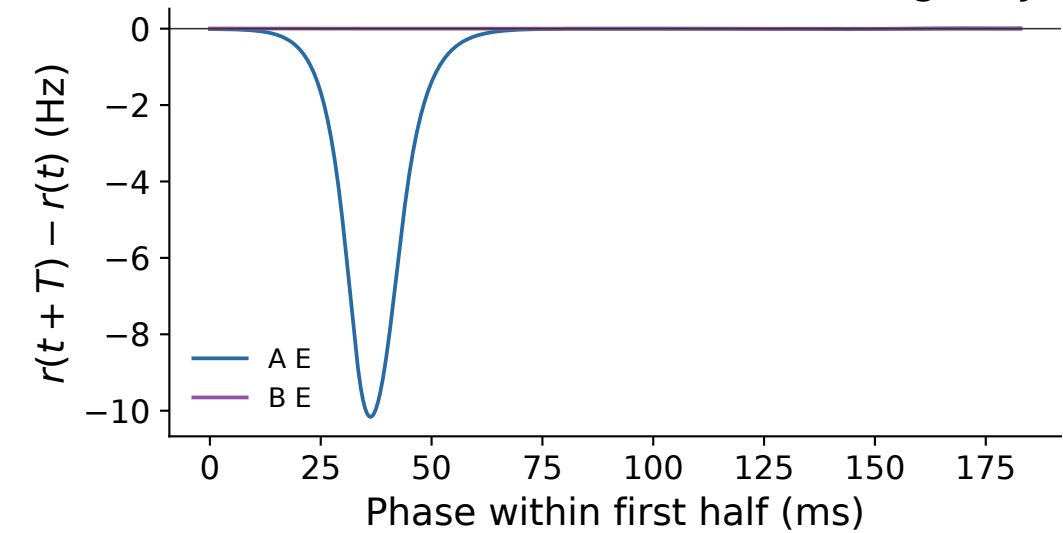

Stable $2T$; supercritical toward lower J

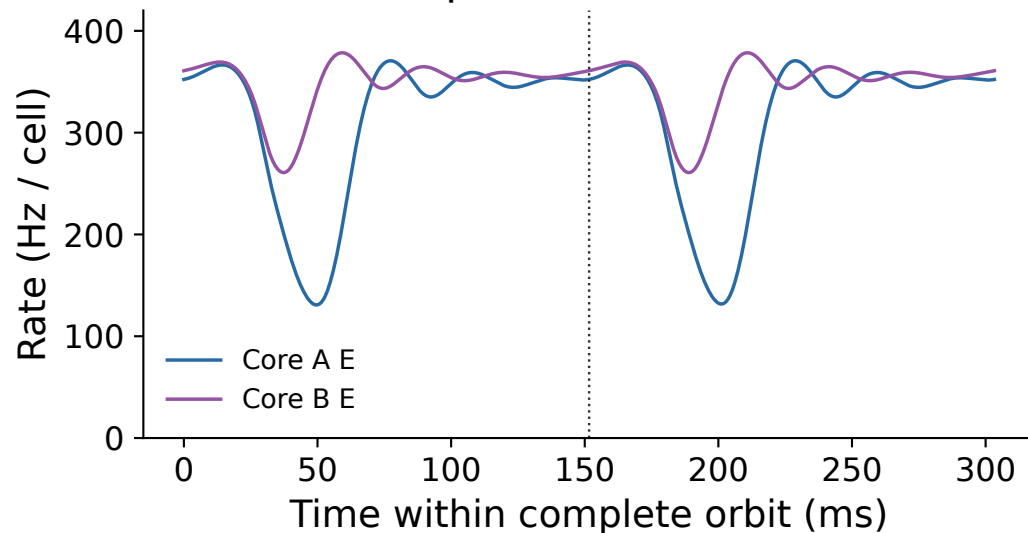

PD2: complete $2T = 365.632$ ms

Unstable $2T$; subcritical toward higher J

PD3: complete $2T = 303.286$ ms

Stable $2T$; supercritical toward lower J
