

Same spatial rate model, $J_{EE, \text{core}} = 0.942$: two locally stable periodic states

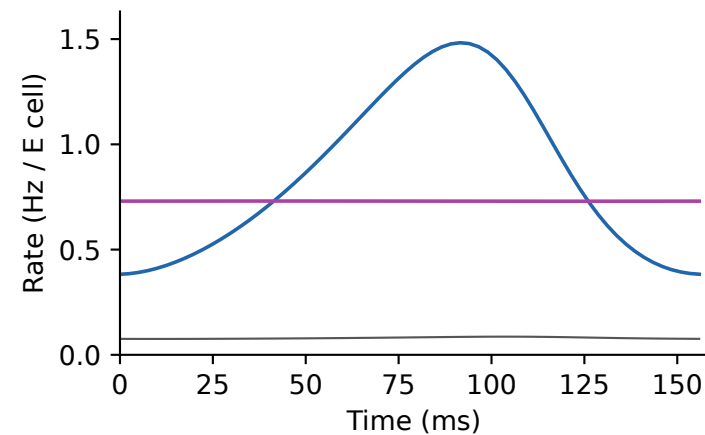

A Checked Floquet multipliers

Largest returned modulus
 $|\mu| = 0.905$

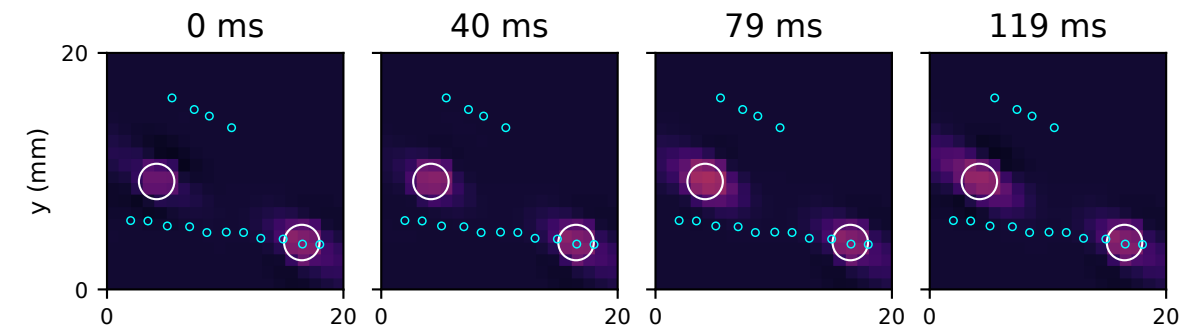

B Core / surround activity

b Small oscillation
 $T = 158.4$ ms

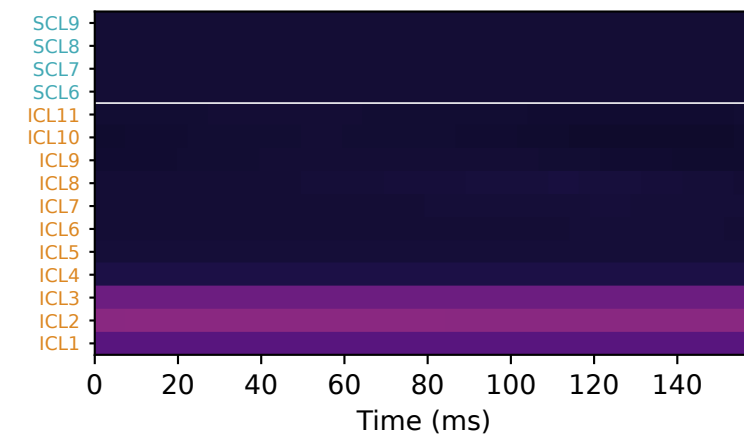

C Same-orbit spatial activity

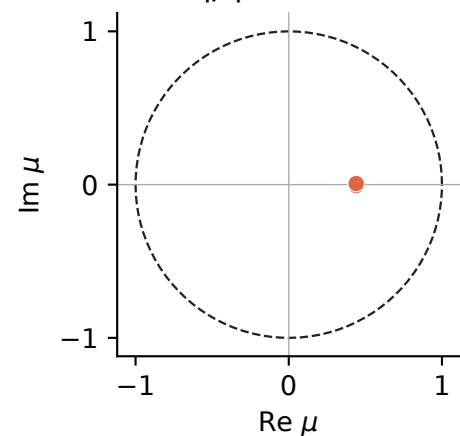

D Contact-weighted rate

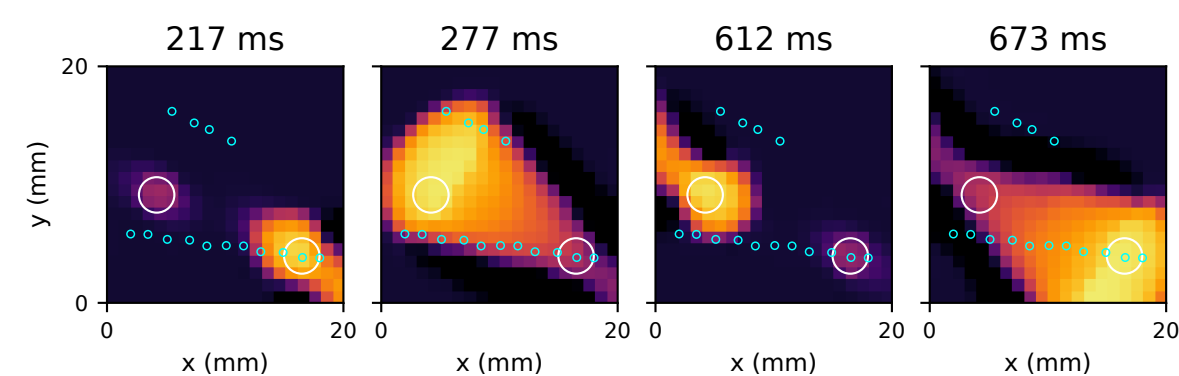

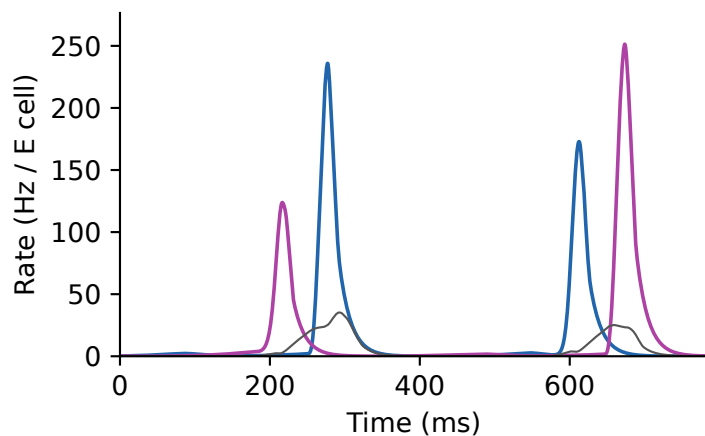

No SCL detections

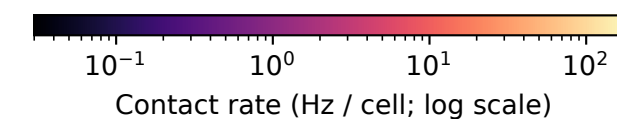

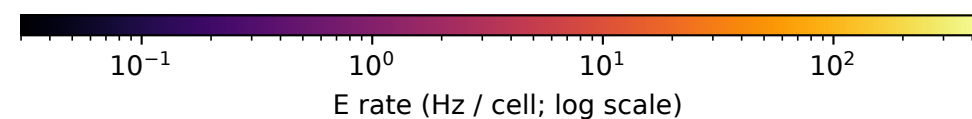

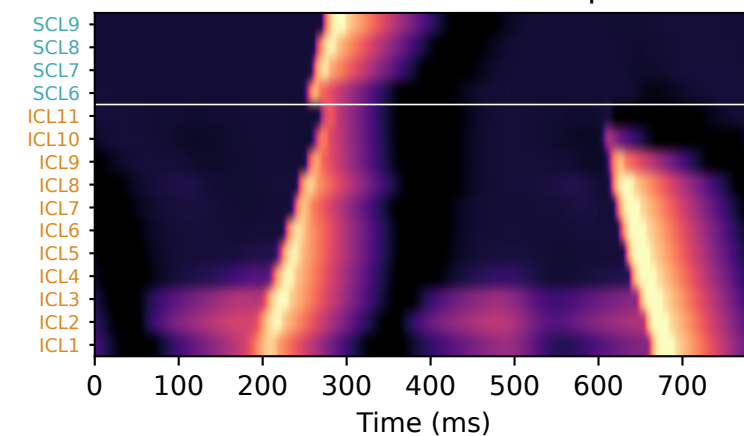

Largest returned modulus
 $|\mu| = 0.440$

c Alternating lead order
 $T = 785.0$ ms

SCL in one of two events / period

— Core A — Core B — Surround
